DocAI - AI Driven Document Analysis

Extract Valuable Insights and Intelligence from Documents without Reading the Full Text

DocAI eliminates the need to read the full text, by using deep natural language processing to extract intelligence from vendor evidentiary documentation as part of the assessment process. Teams can focus on the results instead of spending time reading through countless documents.

Product Overview

- 
Deep Natural Language Processing (“DNLP”)
 Leverages deep natural language processing to extract intelligence from vendor evidentiary documentation.
- 
AI-Supported Questions and Answers
 Ask any English language question to a single document or a series of documents, and DocAI answers the question and highlights where the answer was found.
- 
Document Summarization
 DocAI uses natural language processing and machine learning to understand the content and structure of a document, and then generates a summary that captures the essence of the original text.
- 
Format Agnostic Solution
 Works natively with multiple document formats, such as PDF files, Microsoft Word documents and other text documents.
